

AMENDMENT TO THE ABSTRACT

Please amend the Abstract as follows:

An adjustable lighting apparatus ~~having~~ has a flexible arm and a fully rotatable head is ~~disclosed~~, wherein one end of the flexible arm has a power connector and another end has a terminal fitting. The terminal fitting is attached ~~with~~ to a circular socket on the open end ~~for assembling~~ to assemble the head. The head has a lighting element installed inside and a plug-in portion at one end. When the head and the flexible arm are joined together, the head can be rotated around ~~for~~ in a full circle to adjust the light to a desired position and projection angle without difficulty. ~~This unique design can prevent an awkward situation that the support arm might interfere with the light path and the undesired shifting of the lamp position as a result of the inherent elasticity of the flexible arm.~~
